

PROFILE

Data science and software development professional who builds solutions people actually use. I combine mining-domain exposure, stakeholder engagement and full-stack delivery to take work from a business problem through design, testing, rollout and improvement.

IMPACT

9,779 workflow records unified
7,603 employee records modelled
DAILY excess-hour monitoring in use
PROACTIVE expiry alerts before requirements lapse

CORE VALUE

BUILD Dashboards, web apps, reporting models and automated workflows
CONNECT SQL, HR, INX, SharePoint, Workday, dispatch and PI data
DELIVER Requirements, design, development, testing, rollout and support
COMMUNICATE Managers, supervisors, system owners, SMEs and end users

ROTATION EXPOSURE

COMMERCIAL Workflow reporting and process improvement
FINANCE Business and performance analysis
TRAINING Compliance systems and automated blockings
HR Workforce, talent and succession analytics
MINING Dispatch and operational KPIs
PROCESS Water balance and PI integration

WORKING STYLE

Curious, practical and comfortable moving between technical detail and business conversation. I involve users early, validate logic with subject-matter experts and improve solutions after real-world use.

PROFESSIONAL EXPERIENCE

Graduate Participant - Data Science

First Quantum Minerals | Jul 2025 - Present

Trident Operations, Zambia | Commercial and Business Improvement

- Own end-to-end analytics and automation delivery across Commercial, Finance, Training, HR, Safety, Mining and Process rotations, with frequent stakeholder interaction across departments.
- Built the Excess Hour Report from Gallagher access data, pairing clock-ins and clock-outs to identify 16+ hour shifts and short recovery periods. It is consistently used for daily alerts to line managers and Safety.
- Developed Compliance and Competency intelligence by joining INX and HR data, applying current-role, supervisor, status and expiry logic across 7,603 records. Employees and supervisors now receive advance alerts where no proactive process existed before.
- Created a unified approvals model consolidating 9,779 records across SharePoint, INX, Workday Learning, external training, lodge bookings and business request workflows.
- Built a .NET 10 water-balance application and integration design combining manual dewatering submissions with reconciled PI process data; coordinated requirements and testing with Metal Accounting, Dewatering and Process teams.
- Produced decision-support work for dispatch KPIs, succession and talent metrics, grade alignment, training compliance and automated employee communications.

Platform Developer

Decarbonify AS | 2022 - Jun 2025

Remote

- Delivered an ESG platform redesign through an Agile process, from stakeholder requirements and wireframes through development, testing, feedback, iteration and release.
- Built full-stack features with React, Django and REST APIs, translating sustainability requirements into responsive workflows, dashboards and accessible user experiences.
- Developed reporting features that reduced manual work and contributed to a reported 75% improvement in platform engagement.

Software Developer Intern

Decarbonify AS | 2021 - 2022

Remote

- Built Django, React and Next.js features, designed PostgreSQL schemas and created responsive interfaces with Tailwind CSS.
- Supported onboarding, development-goal tracking, investor and product meetings, action follow-ups and presentation of the ESG platform to external stakeholders.

EDUCATION

Master of Computer Applications in Artificial Intelligence
Shoolini University | 2023 - 2025
GPA 8.82 | Two AI research papers

Bachelor of Computer Applications
Marwadi University | 2019 - 2022
GPA 7.86

UNIVERSITY WORK

AI ADAPTIVE UI Built an interface that adjusted user experience using behavioural data and preferences.

TRANSLATION EVALUATION
Compared model performance using BLEU, ROUGE and METEOR to assess accuracy, similarity and fluency.

LOAN MANAGEMENT Built a Java application covering core loan-management workflows and data handling.

TECHNICAL TOOLKIT

- BI** Power BI, DAX, Power Query, Excel, data modelling
- DATA** SQL Server, Python, pandas, NumPy, ETL, pyodbc, Jupyter
- AUTOMATION** Power Automate, SharePoint Lists
- DEVELOPMENT** C#, .NET 10, Razor Pages, EF Core, Django, React, Next.js, REST APIs
- DATABASES** PostgreSQL, MySQL, SQLite
- DELIVERY** Git, GitHub, VS Code, Docker, Figma, Agile

STRENGTHS

- Stakeholder engagement
- Requirements analysis
- Cross-functional delivery
- Technical communication
- User testing
- Problem solving
- Continuous improvement

SELECTED MINING AND ANALYTICS PROJECTS

- Water Balance Automation** / .NET 10 / SQL Server / Power BI
Created a working web application for controlled monthly dewatering submissions, defined Line 2 and Line 3 rules, supported colleague testing and designed the path into Power BI for a consolidated water-balance view.
- Excess Hour and Fatigue Reporting** / SQL Server / Power BI / Power Automate
Converted raw IN/OUT events into worked-hour and recovery-hour calculations, identified 16+ hour cases and operationalised manager and Safety alerts. The report remains in consistent daily use.
- Compliance and Competency Intelligence** / INX / SQL Server / HR / Power BI
Created employee-level status and expiry logic, resolved current-role and supervisor rules, and enabled advance alerts to employees and supervisors before requirements lapse.
- Succession and Talent Analytics** / Python / Excel / Power BI / Workday
Consolidated 2023-2025 succession, HIPO, hiring, promotion and movement data. Defined bench strength, readiness, lateral movement, cross-functional movement, internal promotion and career-growth measures for executive review.
- Dispatch KPI Dashboard** / SQL Server / Power BI / DAX
Modelled site-specific shift and 15-day crew-cycle rules and developed queue-time, hang-time, unexpected-arrival, reassignment and arrival-performance measures for haulage analysis.
- Grade Matching Prototype** / Python / Excel / Classification
Analysed 81 employee records across job streams, education and experience; assessed current-grade alignment and produced transparent proposed-grade categories for HR review.
- Unified Task and Approval Dashboard** / SharePoint / SQL Server / Power BI
Integrated 9,779 workflow records from seven operational and corporate sources into one governed reporting view for task ownership and management oversight.
- Employee Communications Automation** / Power Automate / HTML / Agile
Redesigned birthday and work-anniversary communications in the FQM brand style and structured employee and supervisor notification flows for rollout.
- Automated Training Blockings** / Training systems / Workflow design
Mapped the paper-to-security blocking process and designed an automated approach to reduce manual handoffs, scanning and spreadsheet dependency.
